THE LOAD

|             |                                |
|-------------|--------------------------------|
| PARTNER     | Example Demolition Contractors |
| SITE        | Brisbane depot · Brisbane QLD  |
| DATE        | 6 Oct 2026                     |
| DOCKET      | WB-2610-2190                   |
| METAL IN    | Ferrous scrap                  |
| WEIGHED IN  | 3.73 t                         |
| TURNED INTO | Processed ferrous scrap        |
| RECOVERED   | 3.49 t (94%) — weighed out     |
| RESIDUAL    | 0.24 t                         |
| WENT TO     | Australian steel mill          |

THE DIFFERENCE IT MADE

CO<sub>2</sub>-E AVOIDED

**5.2 t**

By putting **3.5 t** of recovered metal back into production instead of making it new — the carbon **87** trees absorb over ten years.

WEIGHED IN  
1 load

**3.7 t**

RECOVERED  
94% of what came in

**3.5 t**

NEW METAL DISPLACED  
of ore-based metal that did not need to be made

**3.5 t**

## METAL RECYCLING CO. VS LANDFILL

### IF IT WENT TO LANDFILL

|                           |                          |
|---------------------------|--------------------------|
| Metal lost                | 3.7 t                    |
| Made new from ore instead | 3.5 t                    |
| Carbon from making it     | 5.2 t CO <sub>2</sub> -e |

### WITH THE METAL RECYCLING COMPANY

|                           |                        |
|---------------------------|------------------------|
| Metal recovered           | 3.5 t                  |
| Residual                  | 0.2 t                  |
| Carbon from making it new | 0 t CO <sub>2</sub> -e |

THE DIFFERENCE **5.2 t CO<sub>2</sub>-e** 3.5 t back into production · 87 trees' worth of carbon

## WHAT HAPPENED TO IT

Sorted, cut to size where needed, non-ferrous and contamination removed, baled.

## HOW THESE FIGURES ARE WORKED OUT

- 1. Weighed in.** Every load crosses the weighbridge at North Geelong; the docket weight is the figure used.
- 2. Turned into.** The load is processed on the line for its metal — the product it becomes is recorded against the load.
- 3. Recovered.** The saleable metal weighed out. Where an output weight was not recorded, The Metal Recycling Company's usual recovery rate for that metal is used and the load is marked as an estimate.
- 4. Saving.** Tonnes recovered × the published recycling credit for that metal — the carbon avoided by not making the same metal new from ore, net of collection and reprocessing (steel 1.5 t CO<sub>2</sub>/t, worldsteel; copper 5.2, aluminium 7.9 and mixed metals 4.8 t CO<sub>2</sub>-e/t, US EPA WARM). Metal in landfill does not break down, so no landfill methane is claimed.
- 5. Trees.** CO<sub>2</sub>-e avoided ÷ 0.060 t, what one tree seedling absorbs over ten years (US EPA).
- 6.** Factors marked as stand-ins (brass, stainless) and usual recovery rates should be read as estimates.
