

— RECOVERY STATEMENT

EXAMPLE DEMOLITION CONTRACTORS — RECOVERY STATEMENT

Every load weighed in, what it was turned into, how much metal was recovered, where it went, and the carbon that saved.

TREES' WORTH OF
CARBON

6,536

CO₂-e avoided ÷ what one tree absorbs in 10 years

230 t of recovered metal is about the steel in **256** family cars (≈ 0.9 t of steel each), or **9.2** 40-ft containers of bales (≈ 25 t a box). **392 t CO₂-e** is roughly what **85** cars emit in a year (US EPA: 4.6 t a car).

WEIGHED IN → TURNED INTO → RECOVERED → SAVING

1 · WEIGHED IN 243t 64 loads over the weighbridge	2 · TURNED INTO 4 products Processed ferrous scrap · Sorted metals by type	3 · RECOVERED 230t 95% · 164 t to Australian buyers · 66 t exported	4 · SAVING 392t CO₂-e 6,536 trees' worth of carbon

THE DIFFERENCE IT MADE

CO₂-E AVOIDED

392t

By putting 230 t of recovered metal back into production instead of making it new — the carbon 6,536 trees absorb over ten years.

HOW THESE FIGURES ARE WORKED OUT

1. **Weighed in.** Every load crosses the weighbridge at North Geelong; the docket weight is the figure used.
2. **Turned into.** The load is processed on the line for its metal — the product it becomes is recorded against the load.
3. **Recovered.** The saleable metal weighed out. Where an output weight was not recorded, The Metal Recycling Company's usual recovery rate for that metal is used and the load is marked as an estimate.
4. **Saving.** Tonnes recovered × the published recycling credit for that metal — the carbon avoided by not making the same metal new from ore, net of collection and reprocessing (steel 1.5 t CO₂/t, worldsteel; copper 5.2, aluminium 7.9 and mixed metals 4.8 t CO₂-e/t, US EPA WARM). Metal in landfill does not break down, so no landfill methane is claimed.
5. **Trees.** CO₂-e avoided ÷ 0.060 t, what one tree seedling absorbs over ten years (US EPA).
6. Factors marked as stand-ins (brass, stainless) and usual recovery rates should be read as estimates.
