

THE METAL RECYCLING COMPANY

CAPABILITY STATEMENT · OCTOBER 2026

EVERY TONNE ON THE RECORD.

Recycled steel and non-ferrous metal, processed at our own facility in Victoria — and anywhere in Australia the volume suits — and supplied to mills, foundries, manufacturers and export buyers — every load weighed in, weighed out and reported.

~99%	6–10 t	130–250 t	0.70 t
FERROUS CONTENT	PROCESSED PER DAY	AVAILABLE PER MONTH	CO_2 / T, SCRAP-EAF STEEL

01 · THE BUSINESS

THE METALS BUSINESS OF RECYCLE GROUP

Recycle Group is the Victorian resource-recovery group behind The Mattress Recycling Company and Recycle North Geelong. Its plant recovers 99% of the steel from every mattress it processes — an $8.5 million investment. The Metal Recycling Company is the group's route to market for that steel and for the non-ferrous metal its businesses recover.

WHAT WE SUPPLY

- **Processed spring steel** — high-tensile / high-carbon, ~99% ferrous, ~99% free of fabric and foam. Loose or baled. 130–250 t a month.
- **Ferrous scrap** — sorted, sized where needed, contamination removed, baled.
- **Copper and cable** — sorted copper by grade; cable granulated mechanically, never burnt.
- **Aluminium** — sorted by family (extrusion, sheet, cast), baled.
- **Stainless and brass** — kept off the ferrous line, sorted and accumulated to lots.

WHO WE SUPPLY

- Steel mills and foundries — single-grade feedstock with a known origin
- Traders and exporters — containers packed and counted at our site
- Manufacturers — recycled inputs with the recycled-content basis documented
- Recyclers and councils — a processing partner with an end market

BALED, COUNTED, RECORDED (RENDERED)

THE PLANT

SHREDDERS	2 × Terex twin-shaft, up to 1,400 m³ of product a day
SEPARATION	3 magnets · 2 vibrating decks · 4 dust extraction units · 2 air blades · electrostatic fibre separator
HANDLING	6 conveyors · 3 excavators · 7 operators per shift
THROUGHPUT	One mattress every 38 seconds on average

02 · TRACEABILITY

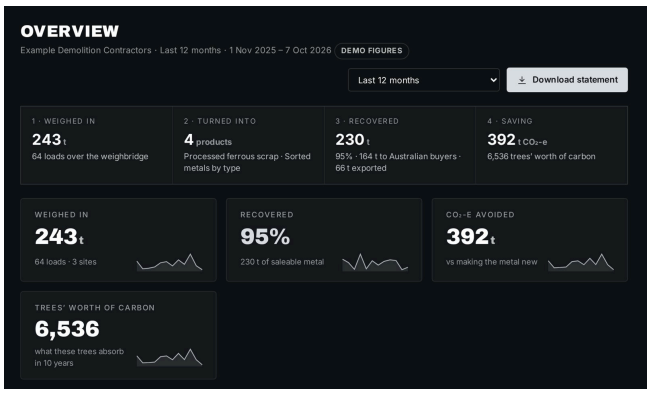

FOUR NUMBERS, EVERY LOAD

Every load that comes through The Metal Recycling Company is weighed in, tracked through the line, weighed out, dispatched and reported. The partner who sent it and the buyer who receives it both get the record.

1 · WEIGHED IN	2 · TURNED INTO	3 · RECOVERED	4 · SAVING
Weighbridge	**Product**	**Weight out**	**CO_2-e**
docket, date, partner, site, gross weight	the line it went down and what it became	saleable metal, recovery %, residual reported	recovered t × published recycling credit

FOR PARTNERS WHO SEND US METAL

Councils, manufacturers, demolition contractors, electricians and recyclers see every load in their own portal, Metal Recycling Connect: weight in, what it was turned into, weight out, whether it went to an Australian mill or into a container, and the carbon that saved. Recovery statements for any period, site statements, and a statement for any single load.

METAL RECYCLING CONNECT · PARTNER OVERVIEW (DEMONSTRATION FIGURES)

FOR BUYERS WHO RECEIVE IT

Every dispatch can carry a load statement: source stream, process, weighed output, bale count, container number and the recycled-content basis. Mills get a single-grade feedstock with a paper trail; manufacturers get recycled content they can put in a report.

> The Metal Recycling Company does the recording and issues the statements. Partners read and download. Figures marked as estimates use the usual recovery rate for that metal; all others are weighed.

RECOVERY STATEMENT · A4
ONE PAGE PER PERIOD: LOADS, WEIGHT IN, WHAT IT BECAME, WEIGHT RECOVERED AND THE CO_2-E AVOIDED.

03 · THE SAVING

STEEL THAT NEVER HAS TO BE MADE TWICE

2,340–4,500 t

CO_2-E AVOIDED A YEAR

1,560–3,000 t of steel a year × 1.5 t CO_2 per tonne of scrap used (World Steel Association). Arithmetic from the public monthly volume; an estimate.

STEEL	1.5 t CO_2 avoided per tonne — World Steel Association scrap fact sheet
COPPER	5.2 t CO_2-e per tonne — US EPA WARM, copper wire
ALUMINIUM	7.9 t CO_2-e per tonne — US EPA WARM, aluminium ingot
MIXED METALS	4.8 t CO_2-e per tonne — US EPA WARM (stand-in for brass)
TREES, CARS	0.060 t CO_2 per tree over ten years; 4.6 t CO_2 per car per year — US EPA

Metal in landfill does not break down, so no landfill-methane saving is claimed. The saving is the carbon avoided by not making the same metal new from ore, net of collection and reprocessing.

WHERE THIS GOES: RECYCLED REBAR

Reinforcing bar is the second-largest home for recycled steel on earth, and Australia's rebar is made from scrap in electric arc furnaces — at 0.70 t CO_2 per tonne of crude steel against 2.32 for blast-furnace steel (worldsteel, 2023). The missing piece is a documented, consistent, locally processed scrap supply.

01

SCRAP STEEL

recovered from mattresses, demolition, manufacturing, councils

02

PROCESSED LOCALLY

cleaned, sorted, baled to a defined spec — at North Geelong or near the source

03

AUSTRALIAN EAF MILL

melted in an electric arc furnace running on scrap

04

RECYCLED REBAR

rolled, cut and bent

05

AUSTRALIAN CONSTRUCTION

52% of all steel use is buildings and infrastructure

The Metal Recycling Company's role is steps 01 and 02 today. The mill partnership and branded recycled products are the roadmap.

04 · CANDIDATE PRODUCTS

WHAT RECYCLED STEEL COULD BECOME

Products that fit the steel we process — heavy, simple, high-volume, and built in Australia. A working list, not a catalogue. Bins, stillages, cages and racking are products the group already buys; making them from its own recovered steel is the obvious first loop.

REINFORCING BAR	STEEL MESH	STAR PICKETS	FENCE POSTS
TEMPORARY FENCING	GUARDRAIL	BOLLARDS	ROAD BARRIERS
STEEL PALLETS	STILLAGES & CAGES	HOOK & SKIP BINS	WASTE BINS
WAREHOUSE RACKING	STORAGE UNITS	DRAINAGE GRATES	MANHOLE COVERS
BRACKETS & SECTIONS	STREET FURNITURE	TRAILER COMPONENTS	BEAMS & SECTIONS

Systems

RECYCLE GROUP

EPA Victoria registration R000312600 · ISO 9001:2015 · ISO 14001:2015 · ISO 45001:2018. Daily safety, training and compliance through the group's eCheck system. Documentation supplied with proposals.

Supply

NATIONAL AND EXPORT

Processing at North Geelong, or arranged anywhere in Australia for the right volume. Road and rail to every state; containers packed for export. Samples before any commercial commitment.

Straight answers. We will tell you exactly where the metal came from and how it was processed, what we can commit to monthly, and anything we do not know yet. We will not claim laboratory analysis we have not carried out, volumes the plant does not produce, grades we do not have, or certifications we do not hold.
