THE CONSIGNMENT

BUYER	Demo EAF Steel Mill
DISPATCHED	5 Oct 2026
CONSIGNMENT	DS-2610-145
PRODUCT	Sorted metals by type, Processed spring steel, Processed ferrous scrap
WEIGHED OUT	26.79 t
BALES	42 (nominal)
CONTAINER	n/a
VEHICLE	B-double
PROCESSED	22 Sept 2026 – 1 Oct 2026
ORIGIN	Recycled, Victoria

WHAT WAS IN IT

one line per source load

PROCESSED	SOURCE STREAM → PRODUCT	ORIGIN CLASS	OUT (T)	DOCKET
22 Sept 2026	Mixed metals → Sorted metals by type	post-consumer · VIC	3.06	WB-2609-2317
24 Sept 2026	Mattress spring steel → Processed spring steel	post-consumer · VIC	6.00	WB-2609-2108
29 Sept 2026	Mattress spring steel → Processed spring steel	post-consumer · VIC	7.72	WB-2609-2109
29 Sept 2026	Ferrous scrap → Processed ferrous scrap	post-consumer (demolition) · QLD	3.49	WB-2609-2190
1 Oct 2026	Ferrous scrap → Processed ferrous scrap	pre-consumer (manufacturing offcuts) · VIC	6.52	WB-2610-2436
Total			**26.79**	

ORIGIN

- Post-consumer 17 t — 63%
- Pre-consumer (manufacturing offcuts) 6.5 t — 24%
- Post-consumer (demolition) 3.5 t — 13%

RECYCLED-CONTENT BASIS

- **Recycled content: 100%.** Everything dispatched is recovered scrap. No virgin metal is added at any stage.
- **Origin:** recovered and processed by Recycled in Victoria. Australian material, Australian processing.
- **Class:** post-consumer (mattresses, demolition, council and fit-out material) or pre-consumer (manufacturing offcuts), shown per dispatch and per line.
- **Weights:** every figure is the weighed output of the processing line. Lines marked * use the usual recovery rate for that metal because the output was not separately weighed.
- **Carbon:** scrap-based EAF steel averages 0.70 t CO_2 per tonne of crude steel against 2.32 t for blast-furnace steel (World Steel Association, 2023 data). The mill's own EPD governs its product; Recycled documents the scrap side.
- **What is not claimed:** the CO_2-e avoided by recycling this metal is reported to the partner who supplied it. Buyers see it for information, not as a credit.

HOW IT WAS PROCESSED

Mixed metals: Hand and magnet sorted into steel, copper and aluminium streams. **Mattress spring steel:** Shredded; steel pulled by magnets, cleaned by vibration, suction and electrostatic separation, then baled or loaded loose. **Ferrous scrap:** Sorted, cut to size where needed, non-ferrous and contamination removed, baled.

HOW THESE FIGURES ARE WORKED OUT

1. **Weighed in.** Every load crosses our weighbridge; the docket weight is the figure used.
2. **Turned into.** The load is processed on the line for its metal. The product it becomes is recorded against the load.
3. **Recovered.** The saleable metal weighed out. Where an output weight was not recorded, Recycled's usual recovery rate for that metal is used and the load is marked as an estimate.
4. **Saving.** Tonnes recovered × the published recycling credit for that metal: the carbon avoided by not making the same metal new from ore, net of collection and reprocessing (steel 1.5 t CO_2/t, worldsteel; copper 5.2, aluminium 7.9 and mixed metals 4.8 t CO_2-e/t, US EPA WARM). Metal in landfill does not break down, so no landfill methane is claimed.
5. **Trees.** CO_2-e avoided ÷ 0.060 t, what one tree seedling absorbs over ten years (US EPA).
6. Factors marked as stand-ins (brass, stainless) and usual recovery rates should be read as estimates.
