## WEIGHED IN → TURNED INTO → RECOVERED → SAVING

| 1 · WEIGHED IN | 2 · TURNED INTO | 3 · RECOVERED | 4 · SAVING |
|---|---|---|---|
| **2.2 t** | **1 product** | **2.1 t** | **3.2 t $CO_2$-e** |
| 1 load over the weighbridge | Processed ferrous scrap | 99% · 2.1 t to Australian buyers · 0.0 t exported | 53 trees' worth of carbon |

## THE LOAD

| | |
|---|---|
| PARTNER | Example Demolition Contractors |
| SITE | Dandenong yard · Dandenong VIC |
| DATE | 2 Oct 2026 |
| DOCKET | WB-2610-2191 |
| METAL IN | Ferrous scrap |
| WEIGHED IN | 2.15 t |
| TURNED INTO | Processed ferrous scrap |
| RECOVERED | 2.12 t (99%) · weighed out |
| RESIDUAL | 0.03 t |
| WENT TO | Australian foundry |

## THE DIFFERENCE IT MADE

$CO_2$-E AVOIDED

**3.2 t**

By putting **2.1 t** of recovered metal back into production instead of making it new (the carbon **53** trees absorb over ten years).

**WEIGHED IN**
1 load — **2.2 t**

**RECOVERED**
99% of what came in — **2.1 t**

**NEW METAL DISPLACED**
of ore-based metal that did not need to be made — **2.1 t**

## RECYCLED VS LANDFILL

### IF IT WENT TO LANDFILL

| | |
|---|---|
| Metal lost | **2.2 t** |
| Made new from ore instead | **2.1 t** |
| Carbon from making it | **3.2 t $CO_2$-e** |

### WITH RECYCLED

| | |
|---|---|
| Metal recovered | **2.1 t** |
| Residual | **0.0 t** |
| Carbon from making it new | **0 t $CO_2$-e** |

THE DIFFERENCE **3.2 t $CO_2$-e** 2.1 t back into production · 53 trees' worth of carbon

## WHAT HAPPENED TO IT

Sorted, cut to size where needed, non-ferrous and contamination removed, baled.

## HOW THESE FIGURES ARE WORKED OUT

1. **Weighed in.** Every load crosses our weighbridge; the docket weight is the figure used.
2. **Turned into.** The load is processed on the line for its metal. The product it becomes is recorded against the load.
3. **Recovered.** The saleable metal weighed out. Where an output weight was not recorded, Recycled's usual recovery rate for that metal is used and the load is marked as an estimate.
4. **Saving.** Tonnes recovered × the published recycling credit for that metal: the carbon avoided by not making the same metal new from ore, net of collection and reprocessing (steel 1.5 t $CO_2$/t, worldsteel; copper 5.2, aluminium 7.9 and mixed metals 4.8 t $CO_2$-e/t, US EPA WARM). Metal in landfill does not break down, so no landfill methane is claimed.
5. **Trees.** $CO_2$-e avoided ÷ 0.060 t, what one tree seedling absorbs over ten years (US EPA).
6. Factors marked as stand-ins (brass, stainless) and usual recovery rates should be read as estimates.
