THE METAL RECYCLING COMPANY

DEMONSTRATION FIGURES

SUPPLY STATEMENT

DEMO EAF STEEL MILL — SUPPLY STATEMENT

Every dispatch from The Metal Recycling Company: what it was, what it weighed, where it came from and the recycled-content basis.

BUYER
Demo EAF Steel Mill

TYPE
Steel mill · electric arc furnace

DISPATCHES
37

SOURCE LOADS
126

METAL RECEIVED
749 t
weighed output of the processing line

RECYCLED CONTENT
100%
recovered scrap, no virgin metal

POST-CONSUMER
94%
the rest is pre-consumer manufacturing offcuts

> **749 t** of recovered metal is about the steel in **832** family cars (≈0.9 t of steel each), or **30** 40-ft containers of bales (≈25 t a box).

BY PRODUCT 749 t

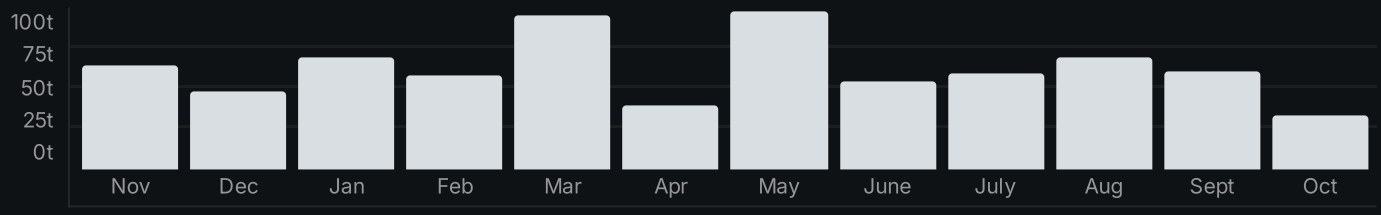

PRODUCT	FROM	LOADS	RECEIVED	SHARE
Processed spring steel — loose or baled	Mattress spring steel	53	474 t	63%
Processed ferrous scrap	Ferrous scrap	47	202 t	27%
Sorted metals by type	Mixed metals	26	72 t	10%
Total		**126**	**749 t**	**100%**

ORIGIN OF THE METAL 749 t

- Post-consumer 579 t — **77%**
- Post-consumer (demolition) 127 t — **17%**
- Pre-consumer (manufacturing offcuts) 43 t — **6%**

RECEIVED OVER TIME tonnes

RECYCLED-CONTENT BASIS

- **Recycled content: 100%.** Everything dispatched is recovered scrap — no virgin metal is added at any stage.
- **Origin:** recovered and processed at the Recycle Group facility, 116 Furner Avenue, North Geelong VIC 3215. Australian material, Australian processing.
- **Class:** post-consumer (mattresses, demolition, council and fit-out material) or pre-consumer (manufacturing offcuts) — shown per dispatch and per line.
- **Weights:** every figure is the weighed output of the processing line. Lines marked * use the usual recovery rate for that metal because the output was not separately weighed.
- **Carbon:** scrap-based EAF steel averages 0.70 t CO_2 per tonne of crude steel against 2.32 t for blast-furnace steel (World Steel Association, 2023 data). The mill's own EPD governs its product; The Metal Recycling Company documents the scrap side.
- **What is not claimed:** the CO_2-e avoided by recycling this metal is reported to the partner who supplied it. Buyers see it for information, not as a credit.

HOW THESE FIGURES ARE WORKED OUT

1. **Weighed in.** Every load crosses the weighbridge at North Geelong; the docket weight is the figure used.
2. **Turned into.** The load is processed on the line for its metal — the product it becomes is recorded against the load.
3. **Recovered.** The saleable metal weighed out. Where an output weight was not recorded, The Metal Recycling Company's usual recovery rate for that metal is used and the load is marked as an estimate.
4. **Saving.** Tonnes recovered × the published recycling credit for that metal — the carbon avoided by not making the same metal new from ore, net of collection and reprocessing (steel 1.5 t CO_2/t, worldsteel; copper 5.2, aluminium 7.9 and mixed metals 4.8 t CO_2-e/t, US EPA WARM). Metal in landfill does not break down, so no landfill methane is claimed.
5. **Trees.** CO_2-e avoided ÷ 0.060 t, what one tree seedling absorbs over ten years (US EPA).
6. Factors marked as stand-ins (brass, stainless) and usual recovery rates should be read as estimates.
